

Objective of Online Sales Dashboard

- 1.) **To analyse customer purchasing behaviour** by identifying buying patterns, customer segments, and purchasing trends.
- 2.) **To evaluate sales performance** by monitoring key performance indicators (KPIs) such as Total Sales, Revenue, Orders, and Quantity Sold.
- 3.) **To compare sales across different countries and product categories** to identify top-performing and low-performing markets.
- 4.) **To develop an interactive and user-friendly dashboard using Microsoft Power BI** that enables quick exploration of business data through visualizations.
- 5.) **To support data-driven business decision-making** by providing meaningful insights that help improve sales strategies, customer engagement, and overall business performance.
